

Thank you for purchasing the Vividly HTML Template.

This is beginner friendly guide to customize the Template. Have any questions? Please feel free to reach us via vividthemes2024@gmail.com.

1. Choose the template and open the chosen template folder via your favorite code editor. Eg: Visual Studio Code, Sublime Text.
2. You will see five files and two folders. Which are index.html, styles.css, script.js, contact.html and blog.html. Also, images folder and blog folder.

To change website's elements, text, images etc., open **Index.html** file in code editor. For your ease, **we added comments to every code you can change.**

Website Title

Change the text in <title> tag. It's on line 7.

*"<title> **Change this title**</title>"*

Website Logo

Themes have 2 logo options. Which is text logo or Image. By default, there is a text logo.

- **Text Logo**

In line 28, you can see the text logo.

*"**Your Text Logo**"*

- **Image Logo**

If you want an image logo, **just delete above line 28 and remove the <!-- and --> symbols in line 31 and line 33.** Then replace the `src=""` with your logo path.

```
"<a class="navbar-brand image-logo" href="#">  
    </a>"
```

Menu

By default, there are 5 menu items. You can change them by just replacing your menu items.

```
"<li class="nav-item navbar-item">  
    <a class="nav-link navbar-link" href="#">Menu Item 1</a>  
</li>"
```

Top Label

To change the top label, just navigate to line 67 and replace the text.

```
"<p class="label-text">The Top Label &nbsp; 🍕</p>"
```

Header

For header, the template has 2 options. Which are image header and video header. By default, there is an Image header.

- **Image header**

To change the image, you need to open **style.css** file and **find line 118 and replace the image path with your image.**

```
"background-image: url('image-path');"
```

- **Video header**

If you want a video header, open **index.html** and **just delete line 75 and remove the <!-- and --> symbols in line 78 and line 82.** Then replace the `src=""` with your video path.

```
"<div class="header-video rounded-4">  
    <video class="header-video rounded-4">  
        <source src="video-path.mp4" type="video/mp4">  
    </video></div>"
```

Brand Slider

Replace image `src=""` with brand logo image paths.

```
"<div class="slide">  
      
      
</div>"
```

About Section

- **About Main Text**

You can change the about section's main text.

```
"<p data-aos="fade" data-aos-duration="2000" data-aos-once="true" class="about-text">
```

```
    Introducing <span class="gradient-text">Vivid Newton™ 2.0</span>  
    <i class="bi bi-stars star"></i>
```

```
<br />
```

```
    Scalable Large-Language Model For Startups
```

```
</p>"
```

- **Bento Box**

Replace img tag's src with your image paths.

`""`

How it Works Section

- **Working Process Main Text and Description**

Change the section title by changing the line **163 –165**.

- **Cards**

The card looks like this code. Change these cards. By default, there are 4 cards.

`"<div class="col-sm">`

`<div class="card rounded-4">`

`<i class="bi bi-pencil-square icon (this is bootstrap icon. you can replace this.)"></i>`

`<p class="card-text">Card Title</p>`

`<p class="card-description"> Card description
 Text break </p>`

`</div>`

`</div>"`

Testimonials

The testimonial card looks like this code. Change these cards. By default, there are 2 cards. You can add more by copying and pasting the same code.

```

"<div class="testimonial-card rounded-4 swiper-slide">
    <div>
        <div class="testimonial-card-author-image">
            
        </div>
        <p class="testimonial-card-text">"testimonial"</p>
        <p class="testimonial-card-author">John Doe</p>
        <p class="testimonial-card-author_role">President, The Brand</p></div>
    </div>"

```

Footer

- **Let's Talk Element**

In line 267, 271, 277, and 281, you can find this code.

```

"<li>LET'S TALK (replace this) <i class="bi bi-arrow-up-right
icon2"></i></li>"

```

Also, change the email in code line 266, 270, 276, 280.

```

"<a class="a" href="mailto:replace-your-email">"

```

- **Footer Content**

Change line 291, and 292 for Footer copyright text and description.

```

"<p class="footer-content-left-description"> Change here </p>"

```

```

"<p class="footer-content-left-copyright"> © 2024 Change here. All
Right Reserved. </p>"

```

You can change sub-menus by replacing the words. There are three main Sub menus. Which are Useful Links, Help, and About. You can replace these words.

Contact Us Page

You can **open the contact.html** file to edit the contact us page.

Replace the contact info.

[illegible]

Email: *name@example.com*

</p>

<p class="contact-details">

<i class="bi bi-map icon3"></i>

Location: 12 Vivid Road, Country

</p>

In line 116, you can embed google map.

For footer in contact us page, **copy and paste the index.html's footer, which we changed.**

Blog Page

You can **open the `blog.html`** file to edit the contact us page.

- **Featured Posts**

In code line 76, 86, and 92, there are three featured posts. You can change the titles, images, and post links there.

```
<a class="a" href="/blog/blog-post-link">

```

```
<p class="blog-header-post-title-long">Post Title</p>
</a>
```

- **Latest Posts**

Sample post code. By default, there are 6 posts.

```
<a class="a" href="/blog/blog-post-link">
<div class="blog-post">

<p class="blog-post-title">Blog Post Title</p>
</div>
</a>
```

For footer in blog page, copy and paste the index.html's footer, which we changed.

Post Layout

In blog folder, you can see two blog posts. Open one of them.

In code line 71, 73, 76-77, and 81, you can change post title, post description, postdate, post author, and post's image.

In code line 86, you can replace the text by actual post texts. Copy and paste multiple article-text p tags, if your text is longer.

```
<p class="article-text">
```

This is text

```
</p>
```

To create a new blog post, open one of these and copy the full code. Then create a new html file in the blog folder. Then paste the code change.

For footer in post layout page, **copy and paste the index.html's footer, which we changed.**
